

DWA-F01D

Digital Wireless Adapter

Preliminary

Optimized for Top-panel Operation

The DWA-F01D is an expandable adapter for wireless receivers, designed to fit into mixer bags for ENG/EPF applications requiring top-panel operation and the option of stand-alone battery power. The DWA-F01D can be used as a two-channel digital receiver with the DWR-S01D, and as a one-channel analog receiver with the WRR-855S.

Three-way Parallel Audio Output - XLR Analog, BNC Digital (AES3id) & Mini-phone Analog

Three-way audio output allows sound engineers to flexibly manage everything onsite. There is XLR analog output for use with portable audio mixers or camcorders, AES3id output for use with portable audio recorders with AES3id digital inputs or long-distance AES3id transmission, and mini-phone analog output for use with PCM recorders or DSLRs. Simultaneous outputs enable easy, convenient and redundant work-flow; for example, use the XLR for mixing, AES3id for multi-track recording, and mini-phone for back up.

(The mini-phone jack is selectable for headphones monitoring or mic level output.)

Three-way Powering

- Battery Powering With the InfoLITHIUM® L Series, DC Powering Using External DC Input

Three-way powering allows sound engineers to adapt to any situation onsite. Choose an optional InfoLITHIUM L series battery for stand-alone use, and Hirose 4-pin DC input for camera-mount operation, with DC supplied from a camera battery. For mixer-bag use with battery systems, centralized management can be achieved using the Hirose 4-pin or BP jack. For AC powering, you can use an InfoLITHIUM battery charger as an AC adapter, or use a conventional AC adapter with the BP jack.
